NOTICE TO AUTHORS

Editorial Policy. *Virology* will publish articles on the biological, biochemical, genetic, and biophysical aspects of virus research. All manuscripts should meet the following four basic criteria. *First*, they should report *original* research results. Manuscripts are accepted for review on the understanding that the same or similar work, wholly or in part, has not been and will not be submitted for publication elsewhere. *Second*, they should report research that is *fundamental*, rather than applied. *Third*, they should report research that is *pioneering* in nature. Authors should clearly understand that space limitations may make it impossible to publish manuscripts that describe work that was performed competently but that does not break new conceptual ground; papers that describe results that have already been obtained with closely related virus or cell systems may be accepted only in exceptional circumstances. *Fourth*, they should be written as concisely as possible, their length being the minimum compatible with a clear presentation and interpretation of the experimental data. Repetition, such as between the Materials and Methods section and figure legends, should be carefully avoided. The Introduction should contain only material relevant to the research that is described; and the Discussion, which should exceed two pages only in exceptional circumstances, should be constructively interpretative and not merely restate the experimental results. Good writing requires careful examination that every word, phrase, and sentence is essential and arranged in logical sequence.

Manuscripts are accepted for review on the understanding that all persons listed as authors have given their approval for the submission of the paper; that any person cited as a source of personal communications has approved such citations; that locally and nationally prescribed safety regulations governing exposure of laboratory personnel and contamination of the environment have been observed; and that all variant virus and cell strains described or mentioned in the paper will be freely available for distribution upon request to all qualified members of the scientific community. Written verification of these conditions may be required at the Editors' discretion. Articles and any other material published in *Virology* represent the opinions of the author(s) and should not be construed as reflecting the opinions of the Editors and the Publisher.

Manuscripts should be submitted in duplicate to the editorial office of *Virology*, 111 Fifth Avenue, New York, N. Y. 10003, by first class mail in flat form.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be typewritten (not mimeographed), with wide margins on high quality bond paper, using double or triple spacing throughout. Subdivision of articles into *Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments,* and *References* is recommended. The manuscript must begin with an *Abstract*. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiment described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given. Reviews of the literature should be restricted to closely pertinent papers. Tables, figures, names, quotations, and bibliography (and all text references to the same) should be carefully checked for errors. A proposed running head of no more than 37 characters should be included.

Figures and Tables. Number all figures consecutively with Arabic numbers and give each one a descriptive legend. All illustrations should be in finished form for the photoengraver. Figures should be planned to fit the proportion of the printed page (5½″ × 8″, column width: 2½″). Lettering on drawings should be made with a lettering set and should be large enough to take a reduction of 50–60 percent. Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper, if used, should be ruled in blue.

Photographs should be glossy prints with strong contrasts, and the magnification should be indicated by a scale. Photographs should be cropped to eliminate background material so that reproduction might be possible without reduction. Grouping of photographs should be indicated.

Tables should be typed on separate pages, numbered consecutively with Arabic numbers, and collected at the end of the manuscript. All tables must have descriptive headings and should be understandable without reference to the text.

References. Names of authors should be mentioned in the text with the year of publication in brackets. References should be listed alphabetically at the end of the paper as follows: Bawden, F. C., and Kassanis, B. (1954). Some effects of thiouracil on virus-infected plants. *J. Gen. Microbiol.* **10,** 160–173. **See, however, the Instructions** for *Short Communications* **below.** The names of journals should be abbreviated according to the *Chemical Abstracts Service Source Index* (1969). References to books should include: author's name, year of publication, title of book (editor of book, if any), edition (if other than first), publisher, and place of publication.

Include in the reference list articles that are "in press," but incorporate in text or use footnotes for "manuscript in preparation," "unpublished observations," and "personal communication."

Abbreviations and Symbols. Where abbreviations are employed the author is asked to follow the usage established by *Chemical Abstracts Service Source Index* (1969 edition).

Nomenclature of Microorganisms. Binomial Latin names, with authorities, should be used in accordance with the International Rules of Nomenclature. Binomials should be underlined in the typewritten copy. A specific name should not be used without an accompanying capitalized generic name. The generic name for each species should be written in full where it first occurs in the text, and again in the summary. Where the generic name appears frequently in the text it may be abbreviated by using the initial letter.

Short Communications. This section is open to short preliminary reports of important findings. They should not exceed six double-spaced typewritten pages including tables and illustrations. Do not use any section headings. All short communications must have abstracts. Illustrative material should be kept to a minimum (usually not more than one table or figure). Literature should be cited as follows: References should be given serial numbers in the text and listed consecutively at the end of the text (serial number, author, name of journal, volume, first and last page, and year of publication).

This section does not provide an accelerated means of publication, but is designed to offer the opportunity to present in brief form noteworthy results of works in progress.

Reprints. Fifty copies of each article are granted free of charge and authors may order additional quantities.
